PRECISE TEMP
REFRIGERATION LTD.

WEBSITE REBUILD · THE CASE FOR THE OWNERS

Why rebuild the website, and what the new one fixes

An evidence-based review of precisetempltd.com, the new site built to replace it, and the three decisions needed to launch it.

Prepared for
The owners of Precise Temp Refrigeration Ltd
1621B McDonald Street, Regina SK

Evidence captured

FOR YOU, THE OWNERS

Why rebuild the website

These are the documented problems the rebuild addresses. We cannot put a dollar figure on them: the current site has no call tracking that we could see. What the evidence does show is problems that may make the business harder to find or to contact.

1 **Our limited search sample did not return the company website**

We ran 4 searches for the company name, web address and phone number, and 8 for local services such as "commercial refrigeration Regina". precisetempltd.com was not returned for any of them. The two searches for the full company name mostly returned an equipment maker's "Precise Temp" product line and unrelated firms [E6]. This was one US-based search tool, with each search run once. It is a sample, not a Google ranking.

2 **Three unfinished pages: moving-company content on Services and Tips, and an empty FAQ**

The Services page lists "Local Moving", "Long Distance Moving", "Storage Services" and "Packing & Unpacking". Tips is "Moving Tips". FAQ says "No FAQs yet". All three pages are submitted to search engines [E1], and a property manager checking the company out can open them too.

3 **The main button goes nowhere, and Contact has no tap-to-call link**

"Free Quote" links back to the home page. On the Contact page, 306-352-1418 is plain text that cannot be tapped to call. No page gives an email address [E1].

4 **The address and phone number are not consistent**

The site itself shows two postal codes. Directory listings carry the old 2301 7th Ave address and four different postal codes. Most listings we checked show 306-352-1418, but mysask411 Moose Jaw and one MapQuest listing show 306-631-0624 instead. Whether that number is the company's, and whether it is current, still needs confirming [E1] [E7].

5 **It is heavy on a phone**

The home page downloaded 4,921 KiB (about 5 MB) in a mobile test, most of it a background video. Its speed score ranged from 62 to 91 across three runs on the same day, and FAQ and Tips scored 41 and 44 [E3] [E4].

6 **Little proof for a first-time customer**

The site shows one testimonial. The only credential it names is a "General Commercial Gas Ticket". It gives no year founded, team or licence number, and BBB shows 0 reviews [E1] [E7].

What we cannot tell you: how many calls the site loses (no one can measure lost calls directly), where the site ranks on Google.ca, or how many people visit. The first week of the plan sets up what can be measured (page 20).

WHAT CHANGES

The new site fixes these, and it is already built

The new site is built and tested on a computer, but it is not online yet. It is a plain, fast website that can be hosted anywhere and is no longer tied to Wix [E13].

PROBLEM TODAY	ON THE NEW SITE
Not returned in our search sample	Each of the 6 services has its own page, titled with the service and the city, for example "Commercial Refrigeration & HVAC, Regina & Moose Jaw" [E13]. Being returned in search still depends on Google; the site only gives it the right material.
Unfinished template pages	Real pages instead: 6 service pages, an emergency page, a service-area page, a real FAQ and 8 how-to guides. Old addresses redirect to the new pages [E13].
Button goes nowhere; Contact not tappable	A red 24/7 call bar on every page and one call button that stays on screen on phones. The home page has 7 tap-to-call links [E13].
Two postal codes on the site	One address everywhere: 1621B McDonald Street, Regina SK S4N 6R5, as you confirmed [E12] [E13].
About 5 MB home page	About 0.4 MB, with photos instead of video. Mobile speed scored 93–97 and desktop 100 on three tested pages, in a local test [E14].
Little proof	Space ready for credentials, team and project photos. Nothing unconfirmed is shown; each item appears once you supply it.
Nothing for an emergency caller to do	An emergency page with steps to take before the technician arrives, plus safety advice for gas leaks and carbon monoxide [E13].

Automated checks passed 5 of 5, and the design passed review at round 11 [E15]. The test scores come from a local preview and will be measured again on the real host.

Tags such as [E1] point to the source list at the back. [inference] marks our judgement rather than a measurement.

WHAT WE NEED FROM THE OWNERS

Three decisions

How much work remains depends on the option and launch scope you choose. These three decisions are for the owners.

1 **Which design: A, B or C**

All three use the same logo, colours, pages and content. **A, "Service Livery"**, is bold and photo-led, and is the fully built and checked site. **B, "Dispatch"**, is a plain service-desk style that puts the phone number first. **C, "Field Guide"**, leads with expertise and the guides. B and C are working previews. Screenshots of all three are on page 19. An AI-assisted review (Astra) leaned B, then A, then C, judging from written descriptions only. If you choose B or C, it needs production work as well as final checks: the host's redirects and missing-page handling, and the request form if you want one. Their structured data now matches A's [E17].

2 **Launch scope: launch the core first, or wait for everything**

See the comparison below. Also decide whether Moose Jaw stays in the service area, and which services to list. Installation, maintenance, residential and artificial ice are not yet confirmed [E18].

3 **Who supplies each owner item, and who runs the site afterwards**

The checklist and the remaining-work table on the next page each need a name against every line.

LAUNCH SCOPE	WHAT GOES LIVE	WAITS ON	TRADE-OFF
Core launch	Confirmed service pages and technician-approved guides. Call only, with the form left off. Only confirmed facts are shown. Guides not yet approved stay unpublished until they are reviewed.	The "required for any launch" items on the next page	The unfinished pages are replaced sooner; more is added as it is approved
Full launch	Core, plus credentials, team, new photos and the request form, and approved project examples placed within existing pages. This build has no separate projects page.	The same items, plus the "only if included" items and section 04	Looks complete on day one, but waits on the slowest item

Our view: a core launch, with the rest added as it is approved, because the unfinished pages stay up until something replaces them [inference].

DECISION 3

Owner checklist and remaining work

REQUIRED FOR ANY LAUNCH	WHO SUPPLIES IT
A technician approves every guide published at launch, and is named as the reviewer	
Legal: approved privacy and terms text replaces the review drafts; name the Privacy Officer and the host	
Photographer's licence to reuse the 2020 company photos	
Wording: whether "repair" belongs in the walk-in and emergency page titles	
Final logo approval recorded by the owners, with the designer review the project's logo standard calls for	
Accounts: who hosts the site, and who holds the Google Business Profile and Search Console	
A measurement owner: checks existing analytics, records baselines, and tests call-link tracking before launch	

REQUIRED ONLY IF INCLUDED AT LAUNCH	WHO SUPPLIES IT
Testimonial: written permission from Fiorante-Lang	
Gas ticket and other credentials: who holds each one, with the exact TSASK wording	
Moose Jaw: whether 306-631-0624 is the company's number, and whether there is a Moose Jaw address	
Request form: create the form account, and name who answers and how quickly	

Testimonials, credentials and extra location details that are not approved can simply stay unpublished. Source: the project's open owner items **[E18]**; the full list is in section 04.

Remaining work and running costs

ITEM	REMAINING WORK	ONE-TIME COST	RECURRING COST	ACCOUNTABLE OWNER
Hosting	Choose a host and deploy the built site	TBD	TBD	TBD
Domain and launch	Point precisetempltd.com at the new host; check redirects	TBD	TBD	TBD
Current Wix site	Decide when the Wix plan ends after launch	TBD	TBD	TBD
Option B or C, if chosen	Production work listed in decision 1, then final checks	TBD	n/a	TBD
Request form (if enabled)	Form account, answering routine, submission tracking	TBD	TBD	TBD
Analytics	Choose a tool, name it in the privacy policy, test call-link tracking	TBD	TBD	TBD
Updates after launch	Adding credentials, photos, approved guides and listing fixes	TBD	TBD	TBD

No costs are estimated here, because none were quoted or measured. Each TBD is filled in once the host and option are chosen.

00 · SUMMARY

Ten issues, ranked by likely impact

They fall into three groups: being found (1–4), turning a visit into a call (5–6), and being trusted (7–10). The order is our judgement [inference]. Each issue says what the new build already fixes and what only you can do.

1 **Three unfinished pages: moving-company content on Services and Tips, and an empty FAQ** Critical

Evidence: /services is headed "Local Moving", "Long Distance Moving", "Storage Services" and "Packing & Unpacking" with the text "I'm a paragraph. Click here to add your own text". /tips is "Moving Tips". /faq says "No FAQs yet". All three are listed in the sitemap Wix submits to search engines [E1].

Fix: new build replaces them with six real service pages, an emergency page, a real FAQ and eight guides; /tips redirects to /guides [E13]. You: approve the service list (section 04).

2 **The business address is not consistent, even on the company's own site** Critical

Evidence: the footer says S4N 6R5; the home-page structured data and the business data embedded on every page say S4N 5R2 [E1]. Directories carry two street addresses (1621 McDonald St and the older 2301 7th Ave E), four postal codes and two phone numbers [E7].

Fix: the new build uses one address, the owner-confirmed 1621B McDonald Street, Regina SK S4N 6R5, in every place [E12] [E13]. You: correct the directory listings (section 03) and confirm the Moose Jaw number.

3 **precisetempltd.com was not returned for any brand or local service query in our sample** High

Evidence: 0 of 4 brand queries and 0 of 8 local category queries returned the site or a Precise Temp profile. Brand queries mostly returned an unrelated "Precise Temp" product line from a refrigeration equipment maker [E6]. No Google Business Profile was observable with our tools.

Fix: the new build targets each service and city in titles, headings and structured data [E13]. You: claim or verify the Google Business Profile, if Google's eligibility rules fit how the shop operates [E11].

4 **Page titles, descriptions and headings give search engines little to work with** High

Evidence: every title follows "Home | Precisetemp"; 0 of 7 pages have a meta description; 6 of 7 pages have two H1 headings (the logo text plus the page heading). The home H1 is "STAY COOL THIS SUMMER" [E1].

Fix: every new page has a unique service-and-city title, a 98–155 character description and exactly one H1 [E13].

5 **The quote button goes nowhere useful, and the Contact page has no tap-to-call link** High

Evidence: the header "Free Quote" button links back to the home page. In the initial HTML, /contact shows 306-352-1418 as plain text with no tap-to-call link, and there is no email address on any page [E1].

Fix: new build: tap-to-call links on every page, a persistent call control on phones, and an optional request form [E13]. You: supply a public email, and decide who answers the form (section 05).

6 **Phone performance is uneven, and a background video is most of the home page's weight** Medium

Evidence: three lab runs of the same home page on the same day scored 62, 79 and 91 for mobile performance [E3] [E4]. The hero video was 3,595,507 bytes of a 4,921 KiB mobile page load [E4]. FAQ and Tips scored 41 and 44 on mobile [E3].

Fix: new build uses graded photos, no video; home page 370 KiB on mobile in a local test [E14].

7 **Few trust signals are published** Medium

Evidence: the site shows one testimonial, and the only credential it names is a "General Commercial Gas Ticket" [E1]. No licence number, team or email was found on the site or in the directories checked; BBB names Greg Brown as President, lists the old address and shows 0 reviews [E7].

Fix: new build has places for credentials, team and projects, and shows nothing unconfirmed. You: supply the facts listed in section 04.

8 **Structured data is thin and on the home page only; no page has a share image** Medium

Evidence: one LocalBusiness block on the home page, with no hours, service area or social links; no og:image on any of the 7 pages [E1].

Fix: new build: HVACBusiness data with office hours, a 24/7 emergency contact point and Regina + Moose Jaw service area on every page; Service and Article data on service pages and guides; a share image on every page [E13].

9 **We cannot see whether the site is measured** Medium

Evidence: no analytics or Search Console verification tag is in the initial HTML. Wix can add these after load or verify by DNS, so this is unknown, not absent [E3].

Fix: you or your web contact: confirm access to Search Console and any Wix analytics in days 1–7, so a baseline exists before launch (section 07).

10 **The footer's Instagram link uses a misspelled domain** Low

Evidence: every page links to http://instgram.com/precisetemprefrigeration. Today it redirects to the correct Instagram profile, but that redirect is controlled by whoever owns the misspelled domain [E1] [E2].

Fix: new build links https://www.instagram.com/precisetemprefrigeration/ directly [E13]. If the Wix site stays up for a while, correct it there too.

What is already in good shape on the live site

- HTTPS everywhere, with HSTS; all host variants end on https://www.precisetempltd.com/ [E2].
- Each page has a self-referencing canonical, and robots.txt allows crawling and lists the sitemap [E1].
- The main number, 306-352-1418, is on every page of the site and on most listings checked. mysask411 Moose Jaw and MapQuest 359495679 show 306-631-0624 instead (section 03) [E1] [E7].
- The About page has the company's clearest copy ("Make it precise"; walk-in coolers and freezers, artificial ice, 24-hour emergency service), which the new site keeps.

Note on wording. These findings describe the HTML our tools received. Google renders pages and may see more than the initial HTML; how Google actually indexes the site can only be confirmed in Search Console.

01 The live site's pages, page by page

Re-measured on 14 October 2026 at 18:17 CST with curl and a Chrome user agent [E1]. These describe the initial HTML that Wix serves.

PAGE	TITLE	H1 HEADINGS	META DESC.	CONTENT
/	Home | Precisetemp	"PRECISE TEMP" + "STAY COOL THIS SUMMER"	none	Four one-line service blurbs, one testimonial
/about	About | Precisetemp	"PRECISE TEMP" + "MAKE IT PRECISE"	none	Real company copy
/contact	Contact | Precisetemp	"PRECISE TEMP" only	none	Form, hours, address; no tap-to-call link
/services	Services | Precisetemp	"PRECISE TEMP" + "Our Services"	none	Template moving and storage services
/faq	FAQ | Precisetemp	"PRECISE TEMP" + "FAQ"	none	Template "No FAQs yet"
/tips	Tips | Precisetemp	"PRECISE TEMP" + "Moving Tips"	none	Template packing advice
/privacy-terms	Privacy & Terms | Precisetemp	"PRECISE TEMP" + "Privacy & Terms"	none	Wix sample text

All seven URLs return HTTP 200 and are in pages-sitemap.xml with lastmod 2025-07-19. The /privacy-terms content is described as Wix sample text in the owner's own audit and the earlier same-day audit [E3].

Hosts, redirects and crawl files

CHECK	RESULT
http://precisetempltd.com/	2 redirects to https://www.precisetempltd.com/ minor
https apex, http www	1 redirect each to the same address
HSTS	Set, max-age 31,556,952 s (one year)
robots.txt	Wix default; allows all; lists the sitemap
/blog	404 (no blog)
/services/walk-in (invented)	200 with the Services page: a "soft 200"

Source [E1] [E2].

What this means

The unfinished pages contain irrelevant content, and the titles leave out useful service and location information. We have not measured the effect of either on Google visibility.

Do not just delete them. Keep the URLs that stay (/services, /faq and the others) and replace their content. /tips and /privacy-terms redirect permanently to /guides and /privacy, and the new build already does this [E13]. After launch, submit the sitemap and watch Google recrawl it [E21].

01 · CONTINUED

Structured data, sharing, links and images

1.1 Structured data and the address

WHERE ON THE LIVE SITE	ADDRESS	POSTAL CODE	PHONE
Footer text, every page	1621 b McDonald street, Regina, SK	**S4N 6R5**	306-352-1418
Home-page structured data (LocalBusiness)	1621 McDonald Street (no unit)	**S4N 5R2**	3063521418
Wix business data embedded in every page	as above	**S4N 5R2**	as above

Source [E1]. You confirmed S4N 6R5 on 14 October 2026 [E12], and the company's footer has used it since at least May 2022 [E9]. An address geocoder returns S4N 5R2 for the street address without the unit [E10]. **Recommended:** use S4N 6R5 with unit B everywhere, and check it once in Canada Post's Find a Postal Code before updating directories, because two codes are in circulation.

The structured data has no opening hours, no service area, no social links and no service types, and only the home page has any [E1].

1.2 Sharing previews

og:title, og:url, og:type and og:site_name are present, but **no page has og:image or og:description** [E1]. No explicit share image or description is supplied, so link previews in texts, emails or social posts may be missing or inconsistent.

1.3 Links

- Footer Instagram: http://instgram.com/precisetemprefrigeration, which currently redirects to the right profile [E2].
- The four home-page "Read more" buttons all lead to /about, not to service pages [E3]. Lighthouse flags them as non-descriptive link text [E4].
- The header "Free Quote" button links to the home page [E1].

1.4 Images and icon

- Four service-card images on the home page use file names as their alt text (for example "PreciseTemp-3.jpg"), and four of six images on /services have empty alt text [E3].
- The browser-tab icon is the default Wix icon [E3].

1.5 Not determinable from outside

- Whether Google Search Console is set up, and which pages Google has indexed.
- Whether Wix analytics or another tracker is in use.
- Whether the Wix menu reveals /services, /faq and /tips to visitors (they are not linked in the initial HTML of home, about and contact) [E3].

What the new build does instead [E13]

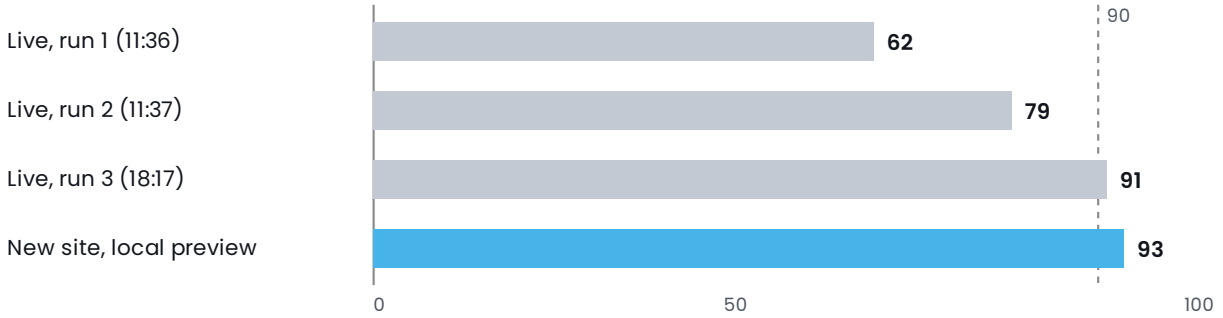

One address string feeds the footer, the contact page and the structured data. Every page has HVACBusiness data with office hours (Mon–Fri 8–4), a 24/7 emergency contact point, the Regina and Moose Jaw service area and the Facebook and Instagram links; service pages add Service data and guides add Article data. Every page has a share image, and descriptive alt text is required for every photo.

02 Fast enough on a good run, heavy on every run

Google's PageSpeed service refused our requests (daily quota exhausted, HTTP 429) [E5], so these are Lighthouse 12.2.1 lab runs on our machine. They vary between runs and will differ from Google's numbers. Use them as ranges.

Mobile performance score, home page

Lighthouse lab score out of 100. Three live runs on 14 Oct 2026; new site measured on a local preview, so network conditions differ.

Sources: runs 1–2 [E3], run 3 [E4], new site [E14]. Desktop: live 89 and 93; new site 100.

Home page weight on a phone

Total bytes Lighthouse downloaded, KiB. The live page's hero is a background video.

In run 3 the hero video alone was 3,595,507 bytes (480p) of the 4,921 KiB [E4]. Sources [E3] [E4] [E14].

Other live pages, mobile (earlier run)

PAGE	PERFORMANCE	LARGEST PAINT	BLOCKING TIME	SEO SCORE
/about	56	8.8 s	640 ms	92
/contact	76	1.9 s	1,010 ms	92
/services	72	3.7 s	650 ms	92
/faq	41	12.9 s	6,170 ms	92
/tips	44	9.6 s	2,740 ms	92

Source [E3], one run each. The home page scored 85 for SEO (missing meta descriptions, non-descriptive links) and 96 for accessibility (low contrast on the "Free Quote" button) in every run [E3] [E4]. The captures include Wix platform scripts. We have not established how much of the load could be reduced by changing the current site.

03 Our limited search sample did not return the company website

How to read this section. Queries were run on 14 October 2026 with a web search tool that is US-only and does not disclose its search engine [E6]. Each query returned about nine or ten results, once. This is a sample, not a Google.ca ranking and not what a searcher in Regina sees. "Listed 3rd" means the order the tool returned. Maps results, star ratings and Google Business Profiles are not shown by this tool.

3.1 Brand queries: the site was not returned for any of 4 in this sample

QUERY	WHAT THE TOOL RETURNED	PRECISE TEMP?
"Precise Temp Refrigeration"	Unified Brands/Randell "Precise Temp" FX series product pages, Zephyr "PreciseTemp" appliance feature, appliance retailers, Precision Refrigeration (UK)	Not returned
"Precise Temp Refrigeration Regina"	Mostly the same product-line and UK pages; HomeStars Regina refrigeration list listed 7th	Not returned
precisetempltd	Unrelated companies with similar names	Not returned
"306-352-1418"	Saskatchewan government and area-code pages	Not returned

When the same tool was limited to directory and social sites, it did return Precise Temp listings on YellowPages, mysask411, MapQuest, BBB, Yelp and ShopLocalNow, and the company's Facebook (listed 1st) and Instagram (listed 2nd) [E6]. So the listings exist; the open question is how they surface on Google.ca, which only a Canadian check and Search Console can answer.

[inference] The name "Precise Temp" is shared with an established commercial refrigeration product line. That makes "Precise Temp Refrigeration Ltd", "Regina" and a consistent address more important in every title, listing and profile.

3.2 Local category queries: not returned for any of 8 in this sample

QUERY	FIRST RESULTS, IN TOOL ORDER (ABBREVIATED)
commercial refrigeration Regina	HomeStars directory, job sites, Norlake dealer page
walk-in cooler repair Regina	Norlake dealer page for Gateway Mechanical (3rd), other Norlake pages
walk-in cooler repair Saskatchewan	Saskatoon press release, Norlake page, equipment makers
artificial ice rink refrigeration Saskatchewan	Equipment makers, patents, gatewaymechanical.ca (6th, 8th), news
HVAC Regina commercial	Trane Regina office, directories, local plumbing and heating firms
commercial refrigeration Moose Jaw	HomeStars Moose Jaw, job ads
24 hour refrigeration repair Regina	Job sites, HomeStars, one Google business page for a plumbing firm, HRAI listing
makeup air unit service Regina	A US contractor, city PDF, unrelated results

Full URLs in order are in the search evidence [E6]. Separately, Google autocomplete returned no suggestions for several Regina and Moose Jaw service phrases (for example "walk in cooler regina", "commercial refrigeration moose jaw"). Autocomplete informed the wording only: whether or not it suggests a phrase does not establish local demand or search volume [E19] [E20].

03 · CONTINUED

Who else appeared, and what the directories say

3.3 Names that appeared in the sample

NAME	SEEN AS	QUERIES
Gateway Mechanical	gatewaymechanical.ca and Norlake dealer pages; walk-in and ice-rink queries	4
HomeStars (a directory, not a contractor)	Regina and Moose Jaw category lists	5
All Season Heating & Air Conditioning	Job ads only	2
Trane Regina sales office; Top of the Line Plumbing & Heating; Provincial Refrigeration Ltd; Majestic Air; All-Rite Mechanical; C & E Mechanical (Moose Jaw)	One query each	1

Source [E6]. Appearing here says nothing about these firms' size or quality; it is only what this tool returned once.

3.4 Directory listings: two addresses, four postal codes, two phone numbers

LISTING	ADDRESS	POSTAL	PHONE	NOTES
Company site footer	1621 b McDonald St	S4N 6R5	306-352-1418	Owner-confirmed code [E12]
Company site data	1621 McDonald St	S4N 5R2	306-352-1418	No unit
YellowPages, Canada411	B-1621 McDonald St	S4R 1C6	306-352-1418	306-352-1773 labelled fax; no website link
BBB	2301 D 7th Ave	S4R 1C6	306-352-1418	Old address; not accredited; 0 reviews; 0 complaints
mysask411, Regina	B 1621 McDonald St	S4N 5R2	306-352-1418	Hours Mon–Fri 8–4
mysask411, Moose Jaw	Moose Jaw, no street	none	306-631-0624	A Moose Jaw listing
ShopLocalNow	2301 7th Ave E #D	S4N 4T1	306-352-1418	Old address
MapQuest 359495679	B-1621 McDonald St	S4N 5R2	306-631-0624	Regina address with the Moose Jaw number
MapQuest 455307555	2301 7th Ave E	S4R 1C6	306-352-1418	Old address, second listing
Yelp	Returned by search; the page refused our requests (HTTP 403)			Not checked

Source [E1] [E7], all read 14 Oct 2026. Listing URLs are in the evidence index.

Moose Jaw: a correction to earlier project notes

Earlier notes said the Moose Jaw number 306-631-0624 appeared on no web page. In this pass it appears on mysask411's Moose Jaw listing and on one MapQuest listing, where it is paired with the Regina address [E7]. No Moose Jaw street address was observed. Please confirm whether the number is yours and current before it is published; a wrong number on a 24/7 service site is costly.

What to do: pick the one address and phone format to publish (recommended: *Precise Temp Refrigeration Ltd, 1621B McDonald Street, Regina SK S4N 6R5, 306-352-1418*), then correct or claim each listing above, starting with the ones that show the old 7th Ave address.

03 · CONTINUED

Google Business Profile, reviews and social: what we could and could not see

3.5 Google Business Profile

Not observable with our tools. No search returned a Google Maps or Google business URL for Precise Temp, and the site has no link to one [E6]. This does not mean a profile does not exist. It means you are the one who can check.

If the shop meets Google's rules, a verified profile is likely the most useful single listing for "near me" and map searches [inference]. Google's guidelines [E11] say:

- A business that serves customers at their locations and does not receive them at its address should hide the address and set a service area.
- A business that also receives customers at a staffed address with permanent signage can show that address and a service area.
- There should be one profile per business. For a service business with more than one location, each location needs its own staff and its own service area. Moose Jaw's operating arrangements should be confirmed before another profile is considered.

So two answers decide the setup: does the McDonald Street shop receive customers during office hours, and does Moose Jaw have its own staff and its own service area?

3.6 Reviews

- Company site: one testimonial, from Chris Fiorante-Lang of Fiorante Homes and Commercial Ltd. [E1]. Permission to keep publishing it is still pending [E18].
- BBB: 0 reviews, 0 complaints, not accredited, not rated [E7].
- YellowPages: no reviews shown [E7].
- Facebook: the search tool's summary mentioned two reviews, but we could not open the page (login wall), so this is unverified [E8].
- Google: not observable.

The new site deliberately publishes no star ratings or review markup for its own testimonials, which Google does not show for a business's self-hosted reviews [inference].

3.7 Social profiles

- Instagram @precisetemprefrigeration, display name "Precise Temp Ltd" [E8].
- Facebook "Precise Temp Refrigeration | Regina SK" [E8].

Follower counts differed between captures and snippets on the same day, so we do not quote them.

3.8 What we could not check

- Google.ca results and the map pack as seen from Regina: the search tool is US-only and cannot be set to a Canadian location.
- Whether a Google Business Profile exists, and its address, hours, rating and reviews.
- Yelp (HTTP 403), Facebook (login wall) and Instagram follower counts (not in the fetched page).
- Variation between runs: each query was run once.

04 A clear brand, and a short list of facts it can claim

The company's own line is "Make it precise". The new brand pack you adopted says the same thing in one mark: a thermometer with red mercury beside a half snowflake, for heating as well as refrigeration [E16].

PRECISE TEMP
REFRIGERATION LTD.

Precise Red	Ice	Ink	Gauge Grey
#E82323	#46B4E8	#12161C	#C3C9D2

Typeface: Poppins. Rules carried into the site: red only for call actions and the wordmark; ice and grey never carry text on white (ice on white is 2.35:1, too low to read); buttons with text use a deeper red, #C81B1B, so white text meets contrast guidelines [E16] [E17].

4.1 Positioning, from what is published

A local Regina shop for commercial equipment that has to stay at the right temperature, with one 24/7 number. Three kinds of visitor matter [inference]:

- **The emergency caller:** a store or restaurant manager whose walk-in is warming, often on a phone outside office hours. Needs the number, in one tap, and what to do until the technician arrives.
- **The planner:** an owner or property manager choosing a contractor. Needs proof of competence, scope and locality.
- **The searcher:** arrives on a question such as "walk-in freezer icing up". Needs an answer, then a route to a technician.

Before launch: final logo approval should be recorded by the owners, together with the designer review that the project's logo standard calls for [E18].

4.2 Voice

Plain and calm: a technician talking, not a marketer. Canadian spelling, metric first, no exclamation marks, no fake urgency and no seasonal banners like "STAY COOL THIS SUMMER".

Company photo from a 2020 shoot. The photographer's licence for reuse on the new site still needs your confirmation [E16].

04 · CONTINUED

Trust signals: what is public, what is missing, what we need from you

SIGNAL	STATUS TODAY	ON THE NEW SITE
24/7 emergency line, 306-352-1418	Mostly consistent The company site presents it as the 24/7 line. Most listings show this number; mysask411 Moose Jaw and MapQuest 359495679 show 306-631-0624 instead	On every page; tap-to-call
Shop address, office hours	Inconsistent see section 03	One owner-confirmed address
"General Commercial Gas Ticket"	Published holder and scope not stated	Kept with the site's existing wording
Licences, certifications, insurance	Not found no TSASK number, Red Seal, halocarbon card, WCB or insurance	Space ready; shown only once confirmed
Testimonials	One permission pending	Static, with name and company
Year founded, team, owner names	Partial BBB names Greg Brown as President; a BBB summary suggests 1999 incorporation, unverified	Not shown until confirmed
Public email	Not found on the site, archives or directories	Waiting for an address
Own photos	Seven from one 2020 shoot	Reused; some pages repeat images
BBB profile	Outdated old address	n/a; update the listing

Sources [E1] [E7] [E9] [E16] [E18].

4.3 Owner items still open

Required for any launch

- A technician approves every guide published at launch and is named as reviewer.
- Legal: read the privacy and terms drafts (ideally with a lawyer), name the Privacy Officer and the web host; approved text replaces the drafts.
- Photographer's licence for the 2020 photos.
- "Repair" wording in the walk-in page title, and the emergency title.
- Final logo approval, with the designer review (section 4.2).

Required only if included

- Testimonial permission from Fiorante-Lang (a consent template is drafted).
- Gas ticket: who holds it and the exact TSASK wording.
- Moose Jaw: is 306-631-0624 yours, and is there a Moose Jaw address?
- The online form: create the form account and decide who answers requests (section 05).

Improves the site once supplied

- Public email (a role address such as service@ on your domain).
- Services you actually offer: installation, planned maintenance, industrial, residential; equipment types and brands.
- Artificial-ice scope: rinks, curling sheets, install or service.
- Credentials you hold: TSASK licence class and number, Red Seal, halocarbon certification, WCB, insurance, COR or HRAI.
- Founding year, owner and team names, team photo, approved project examples (shown within existing pages).
- 15–20 new photos: technicians at work, vans, walk-ins, rooftop units, the shop.

Source: the project's open owner items [E18]. Nothing on this list has been invented on the site; where a fact is missing, the site says less.

05 Most customers will call. Make the call one tap from anywhere.

For a 24/7 refrigeration contractor, the phone is the product's front door. The live site makes the number visible, but not always tappable, and its main button leads back to the start.

MOMENT	LIVE SITE TODAY [E1]	NEW SITE [E13]
A manager's walk-in is warming at 9 p.m.; they open the site on a phone	Home page has 2 tap-to-call links; the header button says "Free Quote" and returns to the home page	Red 24/7 call bar on every page; a single persistent call control on phones; 7 tap-to-call links on the home page
They land on Contact	Number shown as text only, no tap-to-call link in the initial HTML; no email	Call first, then office hours, address and a directions link; emergency line kept separate from office hours
They want to know what to do before the technician arrives	Nothing on the site	An emergency page with steps, and safety triage (gas leaks and carbon monoxide go to the right agency first)
A planner wants a quote for non-urgent work	Form: name, email, phone, comments and a service dropdown whose options are not in the initial HTML; no privacy link noted near the button	Optional form with service options matching the service pages, a company field, a privacy link and a "do not use this form for emergencies" note
They want proof before calling	One testimonial, one named credential	Service pages, FAQ and eight guides; credentials as you confirm them

The form is off until someone owns it

The new site's request form only appears once a Formspree form is created and connected; until then every button says "Contact us" and leads to the call path. This avoids a form that collects requests nobody reads. Before switching it on: decide who answers, how fast on weekdays, and say so on the page [E12] [E18].

No promises the shop has not made

The new site states no arrival or answer times and no after-hours rates. If you want "a technician calls back within X minutes" or a call-out policy on the site, give the wording you can keep every night, and it can be added in a day [inference].

Measure it from day one

On a site like this, the number that matters is calls and requests, not visits [inference]. Recommended: count taps on the call links and form submissions with privacy-friendly analytics, and if the Google Business Profile is verified, read its call and direction-request counts monthly. A start-of-period baseline needs to be taken in days 1–7 (section 07). A tap is not a completed call: completed calls need separate evidence, such as the phone system's log, and lost calls cannot be measured directly.

06 What the rebuild fixes, item by item

The new site is built and tested but not deployed. It is a static site that can be hosted anywhere once you choose a host; the comparison below uses its built pages [E13].

ITEM	LIVE SITE [E1]	NEW SITE [E13]
Pages in the sitemap	7, of which 3 are template	22: home, services hub, 6 service pages, emergency, service area, about, contact, FAQ, guides hub, 8 guides. Privacy and terms are accessible review drafts, left out of the sitemap and marked noindex; approved text must replace them before public launch.
Titles	"Home | Precisetemp"	e.g. "Commercial Refrigeration & HVAC, Regina & Moose Jaw | Precise Temp"
Meta descriptions	0 of 7	Every page, 98–155 characters
H1 per page	2 on 6 of 7 pages	Exactly 1
Structured data	Home only, basic	Every page: HVACBusiness, hours, 24/7 contact point, service area; Service on 6 pages; Article on 8 guides
Postal code	Two on every page	One: S4N 6R5
Share image	None	Every page
Old URLs	n/a	/tips → /guides and /privacy-terms → /privacy (301); /services and /faq keep their addresses
Instagram link	Misspelled domain	Direct link to the real profile
Hero	Background video	Graded company photo; no video

Measured quality of the new build

PAGE (LOCAL PREVIEW)	MOBILE PERF.	DESKTOP PERF.	MOBILE LARGEST PAINT	MOBILE WEIGHT
Home	93	100	2.9 s	370 KiB
Walk-in coolers and freezers	97	100	2.2 s	263 KiB
Guide: walk-in cooler not cooling	95	100	2.4 s	243 KiB

Accessibility, Best Practices and SEO scored 100 in all six runs [E14]. Automated checks passed 5 of 5 (build check, screenshots, runtime, copy, accessibility) and the design review passed at round 11 [E15]. **Caveats:** these runs used a local preview, not a real host and network, so they are not directly comparable with the live numbers; a perfect Lighthouse accessibility score is an automated check, not an accessibility certification [E17]. Re-measure on the real host before and after launch.

06 · CONTINUED

Three design directions, one brand. The pick is yours.

All three use the same logo, colours, typeface, pages, content and single mobile call control. They differ in layout, type scale, voice and how photos are used.

DIRECTION A · BUILT

Service Livery

The van livery as a website: red 24/7 bar, full-width rooftop photo under an ink overlay, bold Poppins 800 headlines, ink bands and a thermometer gauge that fills once.

- The fully built and tested site: 11 design-review rounds, all automated checks passing [E15].
- Voice: a direct service company.
- Suits: callers who want the number now.

DIRECTION B · PREVIEW

Dispatch

The site as a well-run service desk. Opens with scope and the phone number, then three plain cards for "What is happening?", each ending in the call button. White surfaces, compact type, framed photos with factual captions.

- A "When you call" list in place of a slogan.
- Voice: procedural, terse.
- Suits: emergency callers and property managers.

DIRECTION C · PREVIEW

Field Guide

Expertise first: dark presentation bands, white reading pages and large editorial type. Service pages show the warning signs and next steps where supported, with an equipment-information checklist for artificial ice.

- Framed photography; the ice graphic is captioned as an illustration.
- Voice: a senior technician explaining.
- Suits: searchers and planners.

What the AI-assisted review (Astra) said

Astra ranked the directions B first, A second, C third, by fit to the brief as described in text [E17]. It did not see customer data or test conversion, and its review was checked point by point by the project team, which accepted most of its suggestions. Its main cautions, all applied:

- B: put the phone number before the triage choices; no wizard, no fake ticket numbers or status lights.
- C: a dark site with frost effects alone looks generic; give heating and makeup air equal weight; keep equipment and signage legible in photos.
- All: one persistent call control on phones; keep emergency information on light, readable surfaces.

One Astra point was rejected with evidence: it said A's red bar breaks the "red only for call actions" rule, but that bar is the call control [E17].

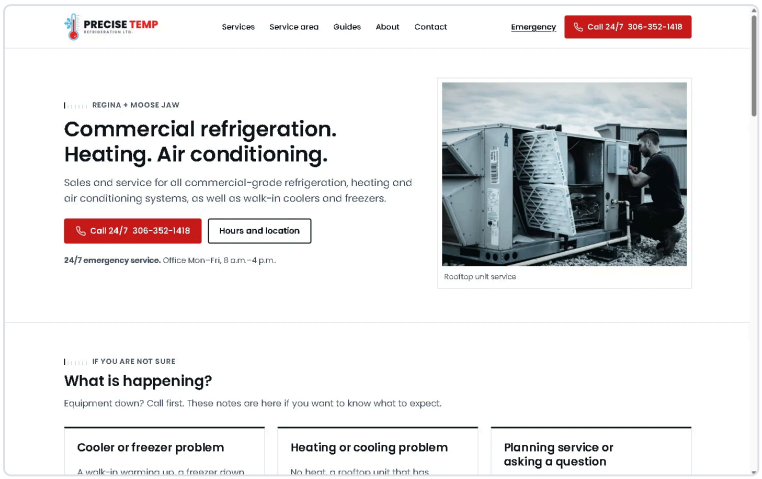

What the pick changes, and what it does not

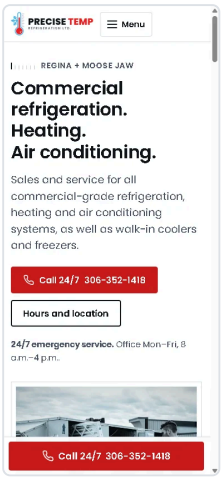

The content, the single address and the owner items in section 04 apply to whichever direction you choose. A is built and checked, and still needs the launch approvals. B and C are previews: they need production work as well as final checks, namely the host's redirects and missing-page handling, and the tested request form if one is wanted. Their structured data now matches A's [E17].

06 · CONTINUED

The three options, side by side

These show the top of each home page as it first appears on a desktop screen (1440 pixels wide) and on a phone (390 pixels wide). Each caption quotes the AI-assisted review (Astra). Astra ranked them B, then A, then C, but it judged from written descriptions, not customer data [E17]. The choice is yours.

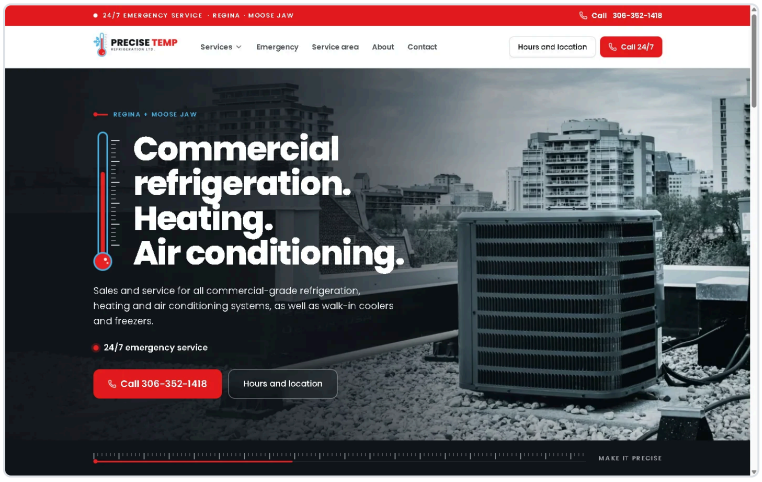

OPTION B · PREVIEW

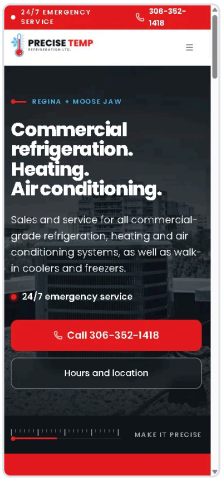

Dispatch

Light pages and a white header with the phone number on the right. Scope and the call button come first, then three plain "What is happening?" cards.

Astra: "Best fit for urgent access, practical comparison and the modest photographic inventory."

Astra ranked it 1st

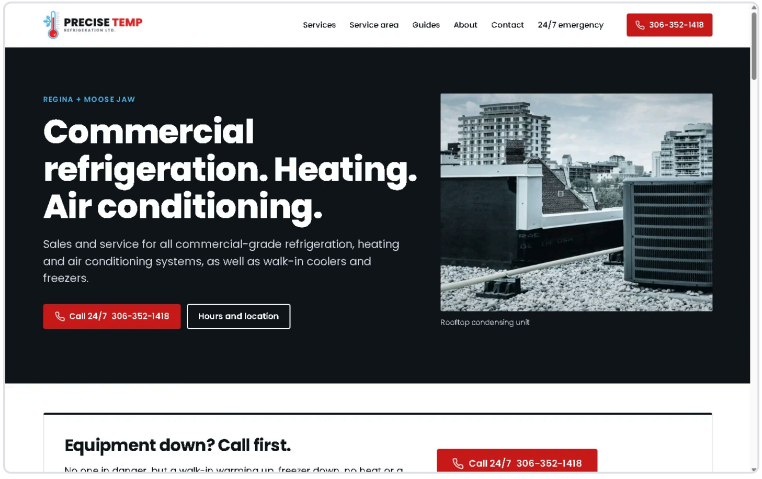

OPTION A · BUILT

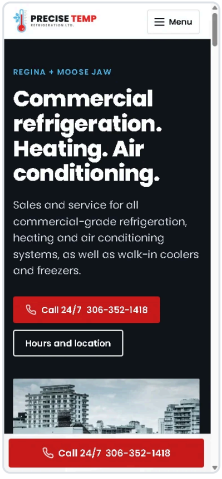

Service Livery

A red 24/7 call bar, then a full-width rooftop photo under a dark overlay with a bold headline. This is the fully built site.

Astra: "Strongest delivery certainty and immediate company recognition; already built and checked, though conversion remains unproven."

Astra ranked it 2nd

OPTION C · PREVIEW

Field Guide

A white header over a dark opening band, with large type and framed photography. Expertise is put first.

Astra: "Strongest editorial opportunity, but requires more care to maintain service clarity and readable mobile pages."

Astra ranked it 3rd

Screenshots captured 14 Oct 2026 from local previews, which are not online [E13]. Only the top of each home page is shown. The full previews include every page.

07 30 / 60 / 90 days

Day counts start once the three decisions on page 4 are made. If the owner items take longer, the launch moves with them; the measurement steps do not wait.

Days 1–7 — measure first

- Check whether a Google Business Profile exists, and who holds it.
- Verify Google Search Console and Bing Webmaster Tools for precisetempltd.com; record the current indexed pages, queries and clicks as the baseline.
- Run PageSpeed Insights on the live home page from a browser, to get Google's own numbers.
- Note today's monthly call volume from the phone bill or system, if available.
- Assign a measurement owner: check existing analytics, and record whatever baselines are available.
- Begin correcting confirmed listing errors, starting with the old 7th Ave address.
- Answer the "required for any launch" items (page 5).

Days 8–30 — launch, if inputs are in

- Choose the host; set up the form only once someone owns the replies.
- Before switching DNS: confirm the kept URLs serve their new content, /tips and /privacy-terms redirect permanently, and both the www and bare-domain addresses end on https://www.precisetempltd.com [E21].
- Before launch: set up and test tracking of call-link taps, and of successful form submissions if the form is on.
- Launch; submit the new sitemap; re-run PageSpeed on the real host.
- Set up the Google Business Profile, if eligible (section 03): exact address, hours matching the site, categories, services, real photos.
- Watch Search Console as Google recrawls the old URLs. Do not file removal requests for URLs the new site still uses.

Days 31–60 — listings and reviews

- Finish correcting or claiming YellowPages/Canada411, BBB, mysask411 (both), ShopLocalNow, MapQuest (both), Yelp, Facebook and Instagram to the one address and phone.
- Start a neutral review request after each completed job: same message to every customer, no incentives, no filtering.
- Reply to every review.
- Technician review of any guides held back at launch; publish each one once it is approved.

Days 61–90 — build on it

- Monthly: read Search Console queries and Business Profile calls; adjust titles where pages get seen but not clicked.
- Add confirmed credentials, team, new photos and approved project examples (within existing pages) as they arrive.
- Ask real partners (suppliers, manufacturers' dealer locators, associations you belong to, rinks you work with) to link to the site.
- Re-run the search sample in this report and compare.

Based on the project SEO plan's 90-day checklist and Google's Business Profile guidelines [E11]. Timings are targets that depend on owner inputs, not commitments.

07 · CONTINUED

How we will know it worked

Every measure starts from a baseline taken in days 1–7. Where no baseline can be taken, the first month after launch becomes the baseline. Targets are aspirations, not commitments: search results and Google's decisions are outside anyone's control.

MEASURE	BASELINE SOURCE (DAYS 1–7)	WHERE TO READ IT	ASPIRATION AT DAY 90
Website call-link taps	Unknown until existing analytics are checked	Site analytics	Tracked every month, and rising month to month
Calls and direction requests from Google	Business Profile, if one exists	Business Profile performance	Profile verified, if eligible; monthly numbers recorded
Form requests answered	Form off today	Form inbox	Every request answered within the time you publish
Pages indexed	Search Console coverage	Search Console	All sitemap pages indexed; no template pages left
Search impressions and clicks for service and city queries	Search Console, last 3 months	Search Console performance	Higher than baseline for service-plus-Regina queries
Brand query result	This report's sample: not returned [E6]	Repeat the same queries; a Google.ca check from Regina	precisetempltd.com returned for "Precise Temp Refrigeration Regina"
Listing consistency	2 addresses, 4 postal codes, 2 phones [E7]	The directory table in section 03	One address and phone on every listing you control
Reviews	Count on each platform in days 1–7	Google, Facebook, BBB	A steady flow from the neutral request routine
Mobile speed on the real host	Live home 62–91 in lab runs [E3] [E4]	PageSpeed Insights	90 or more on home, service and guide pages

Privacy note for measurement

Any analytics added must be named in the privacy policy before it goes live. A cookieless, privacy-friendly analytics tool keeps the policy simple [inference]; the privacy draft already has a place for the host and any processors [E18].

APPENDIX A

Method and caveats

AREA	HOW IT WAS MEASURED	LIMITS
Live-site pages	curl with a Chrome 141 user agent, 14 Oct 2026 18:17 CST; titles, headings, canonicals, meta, structured data, links, forms and addresses extracted from the initial HTML [E1] [E2]	Wix adds content after load; Google renders pages and may see more. Indexing can only be confirmed in Search Console.
Performance	Lighthouse 12.2.1 on our machine: 8 runs earlier in the day [E3], home re-run at 18:17 CST [E4]	PageSpeed Insights returned HTTP 429 (quota) [E5]: no Google-measured or real-visitor data. Lab scores vary widely between runs (62–91 for one page).
Search presence	A web search tool, 4 brand + 8 category queries + 3 follow-ups, once each, 14 Oct 2026 [E6]	US-only, engine not disclosed, no map results or ratings. A sample, not rankings.
Directories and social	Each listing fetched; where blocked, read with curl [E7] [E8]	Yelp 403; Facebook login wall; snippets not treated as fact.
New site	Built pages of build fdc5b6a; Lighthouse on a local preview [E13] [E14] [E15]	Not deployed; local network; re-measure on the real host.
Design reviews	AI-assisted review (Astra), each point accepted or rejected by the project team with evidence [E17]	Advisory; judged from descriptions, not customer behaviour.
This report	Each claim was re-checked against the evidence before publication, including an AI-assisted accuracy check (DeepSeek), adjudicated by the project team	See the accuracy notes kept with the report.

What this report does not claim

- No Google rankings, search volumes, traffic figures or conversion rates: none were measurable with the tools available.
- No statements about competitors beyond what the search tool returned.
- No licences, prices, response times or review counts that we could not see in a source.

Other inputs

The owner's own website audit (a 13-page PDF dated 14 Oct 2026) was cross-checked against the new build; its findings agree with sections 01 and 05. Google autocomplete with a Canadian setting informed the wording only [E19]; its suggestions, or their absence, do not establish local demand or search volume [E20].
